PROJECT COMPLETED AUGUST 2018

United Industrial Solutions (UIS) was contracted by CPM / PPS to carry out the refurbishment of two (2) onsite Laundries. A key challenge for this scope was the timing of the shutdown and the Fibrous Red Zone Area.

To achieve this UIS mobilised a 24hr operation beginning with HP wash down of the walls and floor. After removal of loose debris UIS utilised four (4) static blasting stations and one (1) mobile blast unit to keep the project on schedule. All personnel were supplied and fitted with the correct respirator for the zone to be on them and worn at all times.

Upon finalization of abrasive blasting all debris was removed via a Vacuum unit. The surface was then prepared for painting.

Surface treatment for these works was carried out with three (3) static Airless stations applied by UIS personnel achieving the required Dry film Thickness. (DFT)

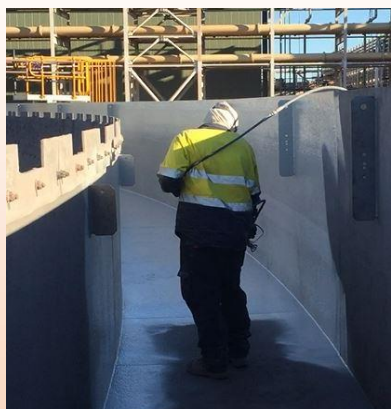

Management of all personnel and third party activities was conducted by UIS including all asset supply and hire. Management worked closely with CPM / PPS to complete these projects within each 7 day shutdown timeframe.
